Now in Spanish: www.gofaster.us

It's been two years since the beginning of **GoFaster** distribution and since then it has achieved to maintain its efficiency and prestaciones according to the different OS/400 versions, from V4R4 up to V5R3, as well as to the new model and families on iSeries y eServer i5.

GoFaster is a powerful application which on a daily basis, keeps growing with new objectives, most of them related with the better performance of AS/400 possibilities. Consulting businesses and users are its best sellers.

Its best asset is without doubt, its capacity to improve several times the AS/400 interactive activities performance, over passing the limitations that any model could have, including the zero interactive.

It has been enhanced with other options which allow to visualize the jobs consuming "too much", including the OS/400 tasks, that can not be seen with WRKACTJOB.

You can also see the number of active processors, the interactive jobs total consume and the CFINT consume.

Option (Help Desk) allows to see the user's screen, which can be seen without previous authorization and even take control on them. And one of the latest options allows the retrieve of deleted registers, but not erased, avoiding some desperate situations.

The creation of the website: www.gofaster.us, gives us the necessary information to understand **GoFaster**'s objective, as well as to show a wide exposition of its possibilities and options. In a special chapter, it guides the beginner user, trying to observe and analyse his machines' situation through the interactive consume and its behaviour whilst GoFaster is activated.

GoFaster is becoming a well accepted product and it surprises that, even though distributed in many countries with weak economies, it is in the more developed countries were it's breaking record sales.

Retrieving Deleted Registers

Any AS/400 technician knows that when a register is deleted in from a file, it's almost impossible to recover. It's very easy to make an error, specially, when the typical "Are you sure you want to delete it?" or the not least familiar, "Are you sure?" messages haven't been provided.

Nevertheless, when a register is deleted it is inaccessible but it's not really erased till the file is reorganized, which it's not done continuously but periodically. This means that the register is inaccessible, but it can still be recorded in the disk or memory.

With this program, named RDR (Retrieved Deleted Records), you can still retrieve the deleted registers, but not suppressed, of any file, total or partially incorporating them to the original file or a specific file.

Special offer for GoFaster's users

The RDR has been integrated in **GoFaster**, improving its features. It can be accesed as an option and also it can be acquired as a separately

Its price is 400 euros. The actual or former GoFaster licenses let clients to reach **RDR option license, for unlimited use, for only 250 euros**.

GoFaster in 520,550,570 and 595

You can have copies for version V5R3 in which the new AS/400 family works, now called, the eServer i5 series. A some 520-7450, P05, with a 30 interactive CPW can reach a 500 CPW with GoFaster, to mean, it **improves its performance 16,6 times**.

Last GoFaster version

GoFaster application can work perfectly with any OS/400 version, from V4R4, and therefore its optimal performance requires constant attention

As a result, the new version **V040922, has been launched**. It presents all the improvements achieved till today.

Any client can apply for a GoFaster copy and will be delivered immediately since the license they contracted gives them the right to any new release during the duration of the contract.

You can apply for some copy on our **Renewal Department**, calling 0034 93.3191723, or by email: att@att.es
