

GoFaster also on i5

GoFaster has followed continuously the AS/400 families' evolution and now has introduced the necessary modifications so that the new i5 series with its i5/OS operative system can take advantage of the **GoFaster's empowering action**.

As you can imagine its objective is still to make all the computer power totally available to the user despite the job you were doing. Certain i5 new series models have limitations for the power attached to interactive jobs and the ones coming from the 5250 Data Stream. This limitation causes when registering an important interactive consume, a general decrease in the machine's performance and not only in the interactive jobs considered.

Some i5 models like the Enterprise type cannot take advantage of the GoFaster's properties. Thus they don't have the interactive consume limited. The rest of the models can obtain an optimal performance with the **GoFaster** application. We can include in this group the Standard models with its interactive performance "0" but which can use all the computer power for any kind of job thanks to **GoFaster**.

As an example of i5 models with "0" interactive are 520-7458, 520-7452, 550-7462, 550-7530 ó 570-7488 models. Previous models such as 270-22A7, 810-7410, 825-7416 or 890-7441 can also apply **GoFaster**.

i5 Standard + GoFaster = i5 Enterprise
(Interactive '0') (Interactive '100')

Other GoFaster Utilities

In this chapter are included several functions that help controlling certain aspects of the operative system. If you want to know more about them visit the web: www.gofaster.us

In the last V050401 release we can see in the Utilities menu the

Option 15.- Job's class.

As it says, it allows us to know the Class of Job under which is being executed. Information that cannot be obtained other way and that is very difficult and busy to find out.

Knowing the Class of Job let's the system administrator control and manage the performing conditions of certain job.

GoFaster global market

Since it first appeared in the USA, three years ago, **GoFaster** has been expanding inexorably through the markets via USA direct sales or via distributors. Currently a distributing net expansion policy exists and it keeps incorporating diverse markets.

Recently a local distributor has taken control of the Japanese market where sales are difficult because of the country's culture

When a product has an added value so important as the **GoFaster**, there are no technical or political barriers to stop it because the millions it saves makes that any kind of business, official institution, council, multinationals and corporations adopt the necessary measures to incorporate it in their informatics' systems..

It is more easy and wise to reduce costs with **GoFaster** than freezing salaries, promote forestalled retirements, reduce workforces and closing non competitive businesses.

Updated GoFaster version

The GoFaster's users, whom want to change to the version *V5R3 for OS/400 or i5/OS*, can have a new GoFaster release: The **V050401**, which has been updated to perform efficiently in the last OS/400 release and the new machines.

You can apply for copies to **Renovaciones** via phone 93.3191723, or via e-mail: att@att.es
