

## GoFaster continues with V5R4

The "interactive virtual card" known as **GoFaster** is going to extend its life for long time since very soon it will be able to work under the **V5R4** version for OS/400 or i5/OS. On the other hand it has been decided to extend its capacity to the V4R3 version since it has been noticed that several users are comfortable enough with this version and, assisted by **GoFaster** can still prolong this situation for several years more.

Due to the voluntary cease by the business that produced the Fast400 program in December 2005 (see [www.fast.400.com](http://www.fast.400.com)) the **GoFaster** stays as the ideal alternative to solve economically the limited artificial performance by the AS/400 in most of its different models and families.

In some countries such as USA, Germany, United Kingdom lots of Fast400 copies had been sold with temporary licenses, which once arrived their expiration date can find in **GoFaster** the solution to obtain an interactive performance without restrictions.

A special commercial and technical helpdesk has been created to ease the transfer of licenses from Fast400 to updated licenses which will allow you to enjoy all the potential of **GoFaster**.

This way, the circumstances in which it was decided to contract software to improve the interactive performance of the AS/400 or iSeries 400 won't be altered since **GoFaster** can even improve Fast400 performance.

<b>i5 Standard</b>	(Interactive '0')
+ <b>i5 GoFaster</b>	(Interactive '100')
= <b>i5 Enterprise</b> (Interactive '100')	

### News on GoFaster

As always, new small variations are added to enhance the mission of liberating interactive adapting to the new versions and modifications occurred in the OS/400.

Two very interesting dynamic screens have been added to the product:

a) **Configurations Partitions Viewer.**

b) **Consume Group Viewers.** Depending on user jobs or operation systems tasks and interactive or batch jobs.

### The intelligent buy

In the USA a high level of acquisitions of **GoFaster's** licenses is being registered due to its progressive incorporation to the total of them already installed.

This has been empowered in the last months thanks to the market's disappearance of Fast400, which has allowed **GoFaster** to become its natural technological heir.

**GoFaster** has been declared "The intelligent buy" by a USA users association thanks to its simplicity on application and because of its affordable price.

But the more surprising real novelty is that **GoFaster** is contracted NOT ONLY because of the necessities of the AS/400 worked with, this is to enhance our configuration and prolong its amortization, BUT that the AS/400 or i5 is ordered incorporating the GoFaster in the investment planning!

Thinking "**GoFaster**" allows you to acquire machines with a low interactive level but with a high power. This kind of machines is normally from the Software group P05 that is why you can get a better price in the IBM's software subscriptions. I.e., a model **830-24D8** (P30) has a 70 CPW interactive and a 4200 CPW ceiling; with **GoFaster** the interactive becomes 4200 CPW without changing Software Group.

Following IBM's tariffs changing to a 120 CPW interactive means to upgrade to a P40 and a noticeable increase in price and each interactive step up means a new increase in prices.
