## Some IBM models rely on the total interactive power total supplied by GoFaster

GoFaster's impact in the iSeries and AS400 markets as well as the new eservers trends have originated the launch of models which don't distinguish between interactive and batch jobs, although the prices of these new models are in line with this new offer.

GoFaster has been adapting to new circumstances and is getting ready for the V5R5. It has also been adapted to work in different logical partitions (LPAR) and therefore prices have been updated to the real user's usage.

## 520 models benefit from GoFaster

Any AS400 family model with a limited interactive capacity can benefit with **GoFaster** thus achieving high rates of performance without having to change or update model. Existen casos en los que la aportación técnica del **GoFaster** es muy provechosa. Veamos algunos de ellos:

· Model 520-7350 (P05) has a potential performance of 3100 CPW but the interactive is limited to 30 CPW. Its cost is around 25.000 euros.

· Model 520-7352 (P10) has a potential performance 1200 CPW but the interactive is limited to 60 CPW. Its cost is around 30.000 euros.

**7350** machine belongs to **P05** group thus taking profit of software's lower prices, being this IBM's or from third parties. Its ceiling is 3100 CPW which is three times higher than the "superior" **7352** model, group P10 and its ceiling is 1200 CPW and is also 20% dearer..

In conclusion, if you've got a **7350**, you have made the right choice and if you still haven't got **GoFaster** you are still on time to exploit in depth its capacity, up to 3100 CPW. If you've got already a **7352** you can still comfort yourself installing **GoFaster** which will allow you to reach a 1200 CPW interactive performance..

## AS400 sales in Europe

The latest research in different European countries reveals that more than 55% of AS400 purchases have been based on opinions, advice and offers from IBM's authorized persons.

Who better than them could know better what the client needs and which machine adjusts better to their needs? In many cases, the need of staying in fixed budgets, has caused to propose solutions which contemplate including GoFaster in the offer as an inevitable complement..
