

Artificial Limitations on your AS400

It is known that more than 80% of AS400, iSeries, i5 and Systems i machines have limitations on interactive applications which heavily penalize performance on all kind of programs. This causes an awkward sensation of configuration incapacity which in many cases it is caused by a bad use of the AS400 characteristics. If the interactive capacity contracted on your machines is less than what you need, you would have obtained a good price but, your performance would show a general saturation feeling that can only be solved by an increase on interactive CPW.

If the alternative of acquiring a new interactive card is too expensive you could instead install **GoFaster** program. GoFaster releases the interactive blockages increasing to its maximum the interactive performance optimizing the machine's performance. In a few words, **GoFaster** will make your machine truly yours and you will reach the **Total Performance**.

MODEL	SOFTWARE GROUP	INTERACTIVE STANDARD	INTERACTIVE GOFASTER	INCREASE BY GOFASTER	PERFORMANCE TOTAL
170-2292	P10	30	220	30 x 7	220
170-2385	P10	50	460	50 x 9	460
270-22A2	P05	25	150	25 x 6	150
270-23F1	P10	50	1070	50 x 21	1070
520-7350	P05	30	3100	30 x 103	3100
520-7450	P05	30	500	30 x 17	500
520-7456	P20	0	6000	6000	6000
550-7154	P20	0	14000	14000	14000
570-7471	P40	0	23500	23500	23500
595-7480	P50	0	50500	50500	50500
720-206A	P10	35	240	35 x 7	240
720-206E	P20	70	420	70 x 6	420
730-2A6E	P20	70	1050	70 x 15	1050
740-2D6C	P50	105	3660	105 x 35	3660
800-7408	P10	50	950	50 x 19	950
810-7428	P20	0	2700	2700	2700
825-7416	P30	0	6600	6600	6600
820-24B8	P30	35	3700	35 x 105	3700
830-23D1	P30	70	4200	70 x 60	4200
840-24C8	P40	120	13200	120 x 110	13200
870-7431	P40	0	11500	11500	11500
890-2AF0	P50	120	29300	120 x 244	29300

¿Really know your AS400 power?

Most installations have at their disposal much more power than what is really being used.

On the adjoined table we can see several cases of different models which offer very high performances that cannot be reached due to limitations set up by the manufacturer.

Looking at the column titled

-INTERACTIVE STANDARD- we can see emaciated numbers compared to those on the column titled

-PERFORMANCE TOTAL- That difference can be with several interactive cards but the cost would be very high.

The numbers offered on column

-INTERACTIVE GOFASTER- equal those on

-PERFORMANCE TOTAL-

This is, with **GoFaster**, you achieve more than you would with all possible interactive cards and with a barely perceptible cost compared to the manufacturers prices. In models such as 520-7450, which is Standard interactive CPW is 30, you can only increase it up to 60CPW with the manufacturer's interactive cards whereas with **GoFaster** it can reach up to 500 CPW by means of a 2.000 euros cost.
